Israel Oduguwa

Senior Full Stack Software Engineer | Product, Systems & Applied AI

Lagos, Nigeria | oduguwa.israel22@gmail.com
israel-oduguwa.vercel.app | github.com/Israel-oduguwa

Full-stack engineer with professional work since 2020 across healthcare marketplaces, enrollment platforms, payments and applied AI. Owns interfaces, services, data and deployment decisions; guided a seven-developer team and delivered measurable improvements in infrastructure cost and enrollment operations.

Technical focus

Product: TypeScript, JavaScript, React, Next.js, Tailwind CSS, Node.js, Express, NestJS, Python.
Systems: PostgreSQL, MongoDB, Firebase/Firestore, Stripe, authorization, background jobs, reconciliation, CI/CD, AWS, Google Cloud, Vercel.
Applied AI: retrieval-backed recommendations, embeddings, model evaluation, agent workflows, OpenAI integrations, Remotion and asynchronous media pipelines.

Selected professional experience

Excel Health Careers Training

Senior Software Engineer, contract | Mar 2025 - Apr 2026

- Redesigned the Next.js enrollment journey, increasing completed enrollments by **73%** and reducing manual operational work by **40%** during the contract period.
- Connected registration records, Stripe events, enrollment state and administrative tracking through a transaction layer supporting **8,000+ successful transactions**. Added event deduplication, reconciliation and recovery for delayed, failed and out-of-order delivery.
- Built acquisition workflows using registration and Stripe revenue data, with quality gates for campaign content and publishing. The work contributed to a **60% increase in qualified student acquisition**.
- Developed asynchronous video generation with OpenAI, ElevenLabs, Remotion and AWS Lambda. Added bounded concurrency, progress polling, latency monitoring and recovery; completed content generation in **under eight minutes per item**.

KinsCare

Software Engineer; technical leadership | Oct 2022 - Dec 2025

- Migrated the React frontend to Next.js and modernized deployment and infrastructure, reducing infrastructure spend by **over 75%**. Recorded Lighthouse performance improved from **59 to 90**, with SEO at **100**.
- Guided **seven developers** through design and code review across marketplace onboarding, geospatial matching, lead routing, subscriptions, conversations and administration.
- Planned and implemented the Realm-to-Clerk identity migration for **5,000+ users** despite limited exportable identity data, preserving account continuity and access.
- Built Python and Express pipelines to refresh, normalize and index thousands of school, course and healthcare records. Maintained model/data artifacts, embeddings and retrieval-backed recommendation APIs with cached results and persisted experiment assignments.
- Developed matching and triage workflows that reduced manual agent review by approximately **60%** and delivered qualified matches within **three days**.

Israel Oduguwa

Further experience, open-source work and education

AI evaluation project

micro1

Software Engineer - AI model evaluation project | Jul 2026 | one month

- Designed source-grounded frontend software-engineering evaluation tasks using realistic technical prompts and structured reference materials to assess reasoning, correctness and instruction following.
- Created expert reference outputs and objective evaluation criteria. Assessed generated technical deliverables for correctness, completeness, source use, performance, security and maintainability. Internal evaluation materials remain confidential.

Open-source engineering

SafeStripe

Creator and maintainer | 2026

- Built a TypeScript reliability layer for Stripe applications with durable webhook admission, stable operation identity, leased workers, guarded local effects and a transactional outbox. Supports PostgreSQL, MongoDB, Firestore and SQLite within documented adapter boundaries.
- Documented transaction and recovery limits with architecture decisions, runbooks and reproducible benchmarks. Added process-level worker failure tests and adapter conformance coverage.
- Retained a real Stripe sandbox lifecycle report covering twelve journeys. A duplicate replay added ten admissions while preserving the original Firestore paid receipt and paid time. Published version **0.3.0 as an evaluation preview**, with explicit production-validation limits.

Earlier experience

Silicio

Full Stack Developer & Frontend Instructor | Nov 2021 - Apr 2022

- Built registration, payment and administrative workflows for a training platform serving more than 400 students per semester. Taught and mentored **800+ learners** across two semesters.

CareerAwesome

Full Stack Developer | Feb 2020 - Aug 2021

- Implemented client and server features for a job-discovery and career-planning MVP, working with product designers and engineers on personalized guidance and delivery.

Education

B.Sc., Food Science and Technology
Obafemi Awolowo University | 2018 - 2022

Professional coursework

Building AI Agents with OpenAI - Edureka, Coursera specialization | Apr 2026
Three courses covering agent design, development and deployment. Verify credential

Generative AI for NodeJS: OpenAI, LangChain - TypeScript - Udemy, Alex Dan | Jul 2024
7.5-hour course. Verify credential
